

ACCESS CONTROL

HARDWARE

- One Source for ALL System Components and Lock Devices
- BlueWave Designed and Owned NetGen Controller

SOFTWARE

- Web Page Module for Daily Administration
- Controls any Commerical, Industrial and Insitutional Door or Gate in the USA
- Developed in Austin, Texas

INTEGRATION

- Active Directory Sync Available
- Compatible with Legacy Security Systems
- BlueWave Video Compatability

IP ACCESS CONTROL OVERVIEW

BlueWave is the pioneer for cutting-edge access control and IoT solutions. Our systems run on a network behind the firewall to ensure the highest level of cyber security. We manufacture both the hardware and software in the heart of Texas, and have the flexibility to meet each of your facility's unique needs.

With BlueWave, your system is built to scale from one door to thousands using the same controllers and software. Our NetGen Controller is UL294 Certified and assembled in the U.S.A. Additionally, each controller and reader is backwards compatible. This allows you to scale your system without replacing the previous controllers. Our products can be powered over ethernet with the option of dedicated power supplies to ensure you are never offline.

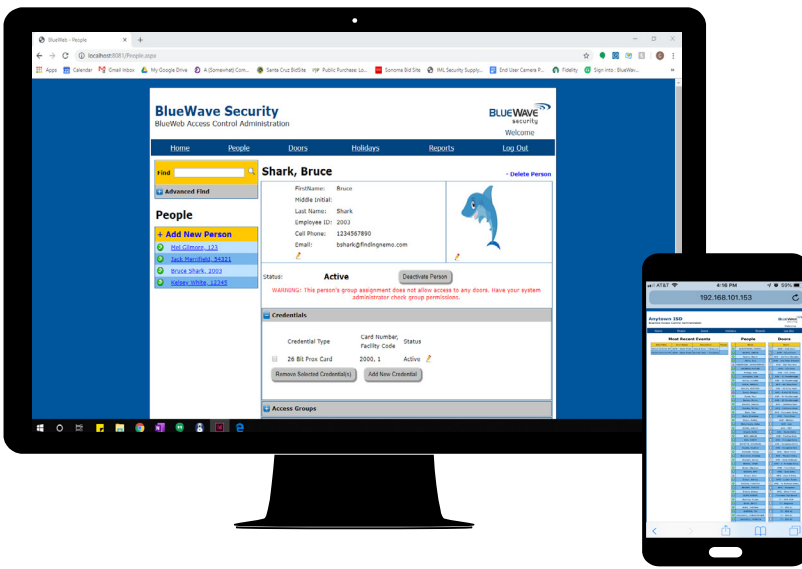

Our software, BlueView, was created specifically to ensure ease of use through intuitive design. We offer a robust array of features including expiring credentials, toggle shifts, 110 bell schedules, and layered admin permissions. You can also create triggers to record activity such as invalid card reads or motion across all platforms. No matter what your security requirements are, BlueWave can help.

SUPPORT AGREEMENTS

Support agreements are available at each access control platform. Agreements provide access to tech support for troubleshooting and training, as well as upgrades and patches. Contact sales for further information.

HARDWARE CATEGORIES

BlueWave is a one-stop provider for a complete end-to-end IP access control system. Whether you are migrating from lock and key, looking to swap out a legacy system, or expanding an existing BlueWave system, our team will work with you to provide the correct Bill of Materials. We have the expertise to specify locking hardware for any institutional, industrial, commercial or specialized door such as a data cabinet.

NETGEN CONTROLLERS

The NetGen Controller is UL294 listed and is designed and owned by BlueWave Security. The NetGen Controller works in conjunction with BlueView software on the existing IP network to manage the database, monitor activity and control electrified locking devices. It is sold as a board only and in a PoE or Power Supply door kit.

CREDENTIAL READERS

Readers vary depending on the type of door and type of credential you are looking for. We offer single gang, mullion mount, and vandal resistant readers that can be keypad, prox, bluetooth or a combination.

LOCKING DEVICES

The three most common locking devices are the electric strike, the electromagnetic lock (Mag Lock) and the electrified lock set. The BlueWave team will help you determine which locks will fit your space.

REX SENSORS

Request for Exit (REX) devices are required to meet building codes when installing a maglock. This ensures that free egress is available for all occupants. Popular REX devices include: REX buttons, REX Motion Sensors, REX Switches and REX Buttons with Wireless Fobs.

PROXIMITY CREDENTIALS

BlueWave offers a wide variety of 26bit prox credentials to work with our access control systems. We offer durable clamshell cards, ISO print-ready cards, keychain fobs, and proximity stickers for non-metal surfaces. Custom printing is also available via our factory.

ACCESSORIES

Door contacts, electrified hinges, door loops, pigtails, back-up batteries, additional enclosures, etc. All the easy to forget but really important accessories to complete a system are available through BlueWave.

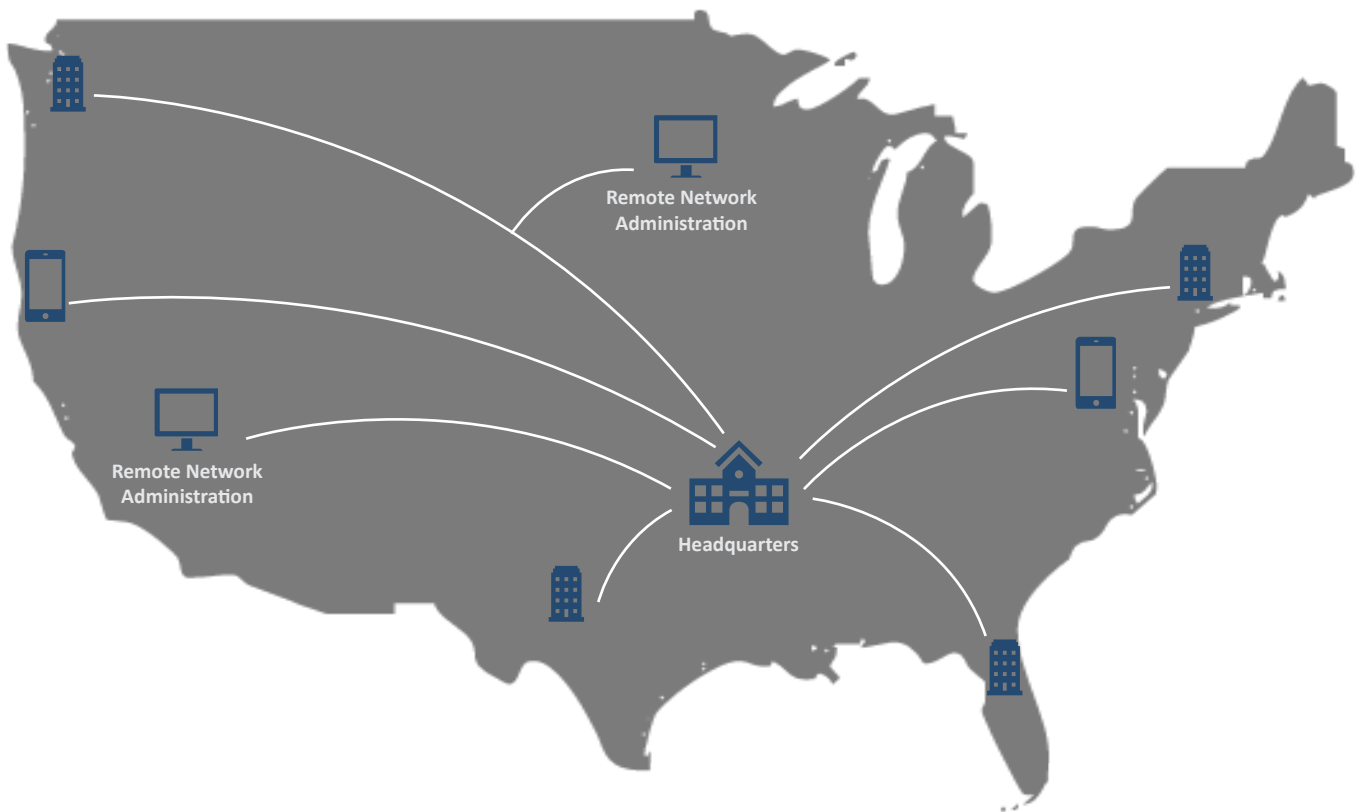

BlueWave also offers a complete line of video surveillance solutions that are seamlessly compatible with BlueWave access control. Contact sales at sales@BlueWaveSecurity.com to learn more.

“

BlueWave has been a highly reliable partner for our access control solution nation-wide. The convenience and customization they provide us for the main Bloomingdale's store on 59th Street has exceeded our expectations. This is a high-tech company whose products work.

Fred Becker, Director of Asset Protection at Bloomingdale's

BlueWave Security was founded in 2005 and is a leader in developing end-to-end, IP-based physical access control and video solutions. We have a national network of certified installers and thousands of end users from retail, education, government and healthcare. BlueWave controllers and BlueView software are made and supported in the U.S.A.
